

Northstar Analytics
Customer Support Playbook
Prepared by: Customer Success Operations

Purpose

This playbook helps support agents respond consistently to customer issues related to dashboards, scheduled reports,

Priority Levels

Priority 1 issues include full platform outage, failed scheduled exports for multiple customers, and login failures affecting multiple users. Priority 2 issues include incorrect metrics on a dashboard, repeated sync delays beyond four hours, and broken workflow notifications. Priority 3 issues include confusion, and minor settings questions.

First Response Targets

Priority 1 tickets should receive a first response within 15 minutes. Priority 2 tickets should receive a first response within one hour. Priority 3 tickets should receive a first response within one business day.

Handling Login Issues

If a customer cannot log in, first confirm whether the problem is limited to one user or affects a full account. Check the user's email address, password, and whether the customer recently changed single sign-on settings. Ask whether the error occurs before multi-factor authentication.

Handling Data Delay Complaints

If a customer reports stale dashboard data, verify the last successful pipeline run in the operations console. Compare the reported data with the latest pipeline output. If the data delay is under 30 minutes and the pipeline is still running, inform the customer that the sync is in progress and provide an estimated time to completion. If the delay is longer, escalate to the data engineering team.

Escalation Rules

Escalate immediately when there is evidence of data corruption, repeated failed exports, suspected security issues, or account access problems. Include account name, affected feature, timestamps, screenshots, and the customer impact summary in the escalation ticket.

Tone Guidelines

Agents should avoid technical jargon unless the customer is a technical administrator. Responses should clearly state the problem, the steps being taken to resolve it, and when the next update will be shared.
